

# MetaTrader 4 Trading Terminal

The MetaTrader 4 terminal is a perfectly equipped traders workplace that allows to trade in the financial markets (Forex, CFD and Futures). It provides the necessary tools and resources to analyze price dynamics of financial instruments, make the trade transactions, create and use automated trading programs (Expert Advisors). It represents the all-in-one concept and is the most popular trading terminal in the world.

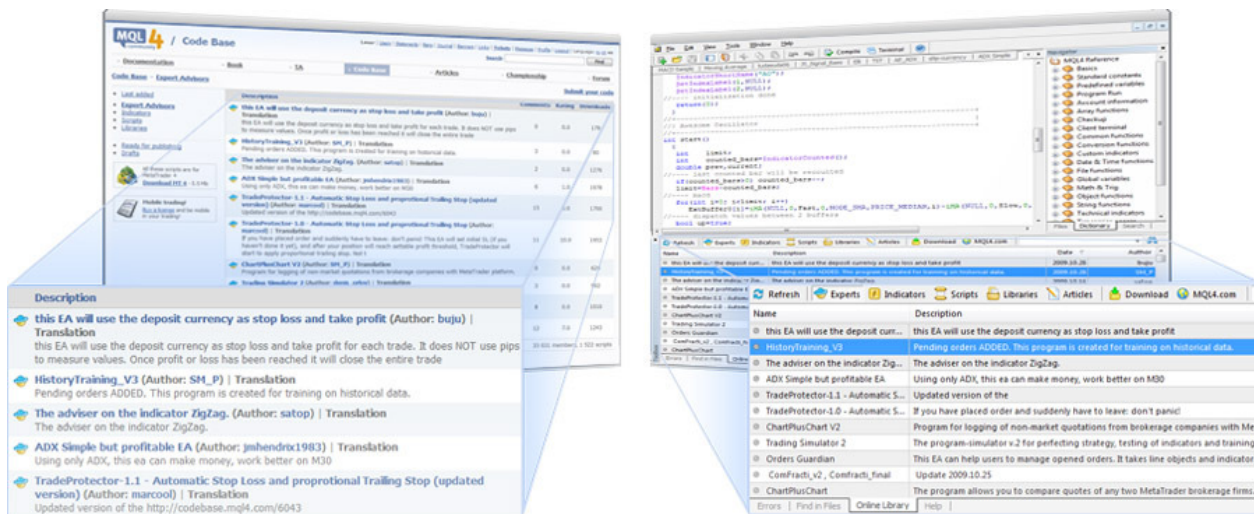

The MetaTrader 4 terminal offers a number of impressive analytical tools. There are nine timeframes available for each financial instrument that provide detailed analysis of quote dynamics. More than 50 built-in indicators and tools help simplify the analysis, enabling to determine trends, define various shapes, determine entry and exit points, etc. Besides, one object can be applied over another one, which comes in very useful in various trading systems. Need more? You can also print charts of any instruments and conduct "on paper" analysis.

The analytical resources offered by the MetaTrader 4 terminal aren't limited to these examples. Should you need to use any specialized tool, you can find it in the free-of-charge Code Base (Custom Indicators) or create it using the MQL4 language. In this code base you can find Expert Advisors that will completely automate your analytical and trading processes. You can also develop your own Expert Advisors and use them in the MetaTrader 4 terminal.

Visit the official website of the annual Automated Trading Championship conducted by our company to see how Expert Advisors operate and to evaluate their possibilities.

## Automated Trading and MQL4

The MQL4 IDE built-in development environment allows you to develop your own Expert Advisors, custom indicators and scripts. Modern traders need them in their daily trading.

MetaTrader 4 contains all the trading functions you will need. The terminal supports three types of operation execution, including Instant Execution. All types of orders are available, ensuring fully-fledged and flexible trading activities. Traders use market orders, pending and stop orders, as well as the Trailing Stop.

There are several ways to place trade orders in the terminal, including the ability to trade directly from a chart. The embedded tick chart is extremely useful for an accurate determination of entry and exit points. Alerts on trade positions is another handy tool to help you track all favorable moments. So, with the MetaTrader 4 trading arsenal, you can implement all of your trading strategies effectively.

## Mobile Trading

As a busy trader, you can't afford to waste time sitting behind a computer waiting for a favorable moment. This is why we have developed mobile terminals.

Security of making the trade transactions is of paramount importance for programs of this kind. In MetaTrader 4, we have come up with the perfect solution. All data exchange between the client terminal and the platform servers is 128-bit encrypted. This is enough to ensure the security of trade transactions. In addition to this, you can use the improved security system based on the algorithm for public-key cryptography (RSA). Information protected in this way is impossible to hack within a reasonable period time.

The MetaTrader 4 terminal comprises a whole range of functions, but it takes just a few minutes to get acquainted with them. Moreover, the terminal is supplied with a built-in 'Help' facility to answer all of your questions. We've made the MetaTrader 4 terminal simple and convenient in use, so that you can invest your time into your most important work - trading!

MetaTrader 4 is probably the best client terminal in the market. To find out why it has become the choice of hundreds of brokerage companies and an army of traders all over the world!
